

Debris App

Columbia Space Initiative, Hackathon 2019

- *Software Track Winner* 🏆

<https://columbiaspace.org/spaceathon/>

Marco Montalto Monella

Overview

Debris App allows users to explore and become aware of the amount of detectable debris in LEO (Low Earth Orbit).

In order to achieve this it has two main features:

- Showing debris in AR (*skyview*)
- Number of debris collision if an object of a given size is thrown into orbit from a given location

■ Tracked in the last week
■ Untracked in the last week

Goal

“Increase awareness on the topic”

Target Audience

**General Space Education
Community**

High School Students

Space Enthusiasts

Technology

Expo

- Portability
- Ease of development

Data Sources

- LeoLabs Space API
 - <https://www.leolabs.space>

Challenges

Convert from ECI to LLA

**Show State Vector using device
gyroscope in ECI**

Time & Team Size

Live Demo

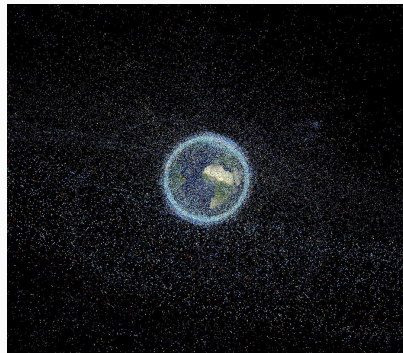

Predicted Completion Time

(for a first real alpha version)

~1-2 weeks

Thanks for listening

*Space exploration is a force of nature unto itself that
no other force in society can rival.*
